

Stamping & Lineside Support

DESCRIPTION

Within this automotive facility, a fleet of four AGVs transports racks and containers between stamping, the body shop, lineside, and a centralized storage area. Counterbalance AGVs support lineside operations by bringing parts to and from points-of-use and the centralized storage area. Meanwhile, tugger AGVs move stamped panels from stamping to the body shop. Utilizing a web interface, SGV Manager, our top-level software package, communicates directly with customer systems while managing all AGV movements and tracking product locations.

FEATURES

LOCATION	Michigan, USA
VEHICLE COUNT	4
VEHICLE TYPE	Counterbalance; Tugger
VEHICLE CAPACITY	3,500lbs; 10,000lbs
INDUSTRY	Automotive
LOAD TYPE	Racks
HOST CONTROLS	SGV Manager
BATTERY CHARGING	Opportunity

BENEFITS

- No plant interruptions during installation
- Tight software integration with ERP
- Flexible solution for changing demands
- Controlled, predictable parts transportation
- Optimization of operating efficiency
- Reduced damage to AGV-handled parts
