Heat EXCHANGERS

Size matters in this industry. Bigger is better, as long as you use A&B Process Systems. Why? Because we have size on our side – 250,000 square feet of manufacturing capacity, eight plants, ASME certified facilities, 32-foot ceilings and cranes that “bench” 120,000 pounds.

With 3 shifts, we deliver high quality equipment to the chemical, petroleum, pulp/paper, renewable energy, and water treatment industries faster than other suppliers.

We offer:

- In-house engineering to size equipment to your specs
- ASME shell and tube heat exchangers
- Quality custom design and fabrication for a variety of applications
- Carbon steel and/or stainless steel fabrication
- Industrial evaporators, calandrias, preheaters, condensers, vapor heads
- Multiple shifts = better leadtimes

We have size
on our side.

Insight.

Going beyond building systems and equipment
