

EQUIPMENT UPGRADE KIT

Belt Change Kit

Change to the belt that is right for your products

An upgrade kit can give you more throughput, greater operating safety and better hygiene on your existing equipment - with quality results.

Do you have the right FRIGoBELT® conveyor for your current product range? If you have changed your product range or added new products, your belt may not match current production needs.

Running products on a belt selected for previous product lines can be costly. If your belt doesn't match your current products, you may experience product loss and damage, and poor capacity utilization. It's always best to employ the FRIGoBELT conveyor that best matches your current needs.

Minimize waste and increase throughput

If your current products are taller than previous product lines, they may suffer damage from collision with upper belt tiers. If shorter, then your freezer stack space is under-utilized. If belt mesh is too wide, then sensitive product may get damaged, and debris can get stuck in the mesh. Mesh wire that is too thin may become damaged if frozen product sticks to the belt.

JBT can now offer you a way to achieve maximum production efficiency, helping you to cut waste by minimizing damaged and lost product.

Ensure maximum ball rail lubrication

The Belt Change Kit gives you a new FRIGoBELT conveyor, matched to your current production needs. Switch belts and increase production throughput.

There's a belt for practically every food product, from the most delicate to the bulkiest. A wide range of mesh types matches product characteristics. An assortment of link heights ensures optimum space utilization.

Once installed, your new FRIGoBELT conveyor will help you to cost-effectively meet your current production needs, by increasing throughput and minimizing damaged and lost product. And your sanitation costs will decrease, since product won't get caught in the belt mesh or collide with belt tiers.

How does it work?

A JBT application specialist will help you select the right belt for your production needs. Together with customers, we have identified optimum freezing parameters for over 15,000 different food products. You can be sure that we will help you pick the correct belt specification.

A trained JBT technician will oversee and certify the installation. We will also help you to sell your old belt.

In conjunction with the belt replacement, it may also be the right time to inspect and overhaul your belt drive system. If you wish to do so, please advise us.

What are the benefits?

- Increased production throughput. Run product at a higher belt speed with the same product dwell time
- A significant drop in damaged and lost product, which means increased profits
- Lower sanitation costs, as less product sticks in the mesh.

What's included?

When you have chosen the Belt Change Kit you will get:

- A completely new FRIGoBELT conveyor that will meet your production needs
- The service of a JBT specialist to help you pick the belt that is right for you
- Adjustments of the drive system to fit the new belt
- The services of a trained JBT technician to oversee and certify your belt's installation

What does it cost?

The cost of the Belt Change Kit depends upon the size of the belt that your system requires. Contact your JBT FoodTech representative for an exact quotation as well as a calculation of your potential payback time.

As always, we stand behind what we sell. One call gets it all.
