

## Upgrade Kit | Tuna Fillers

# Tuna Auto Weight Control

Keep the filling weight centered on a target value.

One of the most critical aspects of the filling process is weight precision which impacts the product's profitability. Knowing this, our team developed a kit to improve further and have the most accurate weight control, The Tuna Auto Weight Control.

The Tuna Auto Weight Control is a spare part installed on JBT Tuna Filler. This part has a software, which manages the settings of the filler, based on the feedback received from the scale.

The kit assures high filling precision, which is significant cost savings for precooked tuna.

## Benefits

- ✓ Automatic setting of the filling machine to keep the weights centered on the target value. In this way the machine regulation activity is no longer entrusted to a line operator, resulting in greater reliability.
- ✓ Reduction of the standard deviation of the filling process
