Model R - Complete Machine Refurb

- **Complete machine rebuild refurbishment**

Your JBT filler/seamer is an important part of your installed base. Keep it in optimal condition with a complete machine refurbishment. The JBT Customer Care Workshop rebuilds existing JBT filling and seaming equipment in order to keep your lines operating at optimal specifications. A JBT filler/seamer rebuild starts with the complete disassembly of the equipment. All wear and tear parts are discarded and we conduct a risk assessment on all recycled parts. In the next step we build-up the machine with new and recycled parts after thoroughly checking the recycled parts. In the end, your machine is updated to the current standards.

- **Re-engineered to your specific line requirements**

We rebuild the machine in accordance with your application, product and packaging, other peripheral devices and line controls.

- **Executed to the new industry standards**

We update the machine to legal standards and common safety regulations. Controls and the PLC are also taken to a higher level and smoothly integrated in your line management system software.

- **Warrantied and guaranteed performance**

We think of a rebuild essentially as an order for a complete new JBT machine. Consequently, the rebuild operation is supervised by a dedicated Project Manager. You receive equal warranty conditions as that of new JBT equipment, including Factory and Site Acceptance Testing. Finally we ensure installation, commissioning and on-site training of your operators.

By choosing a Model R solution to rebuild your filler/seamer you renovate your future uptime ensuring product quality, food safety and low Total Cost of Ownership

We perform rebuilds of stand-alone seamers including synchronization with fillers or worm in-feed table applications.

Mid-range filler-closer group (300-600 cpm). Upgraded with full C.I.P. features and a nitrogen doser for beverage applications.

Complete machine rebuild of a 10-head X59 seamer synchronized with a high-capacity filler with 66 fill stations. Output 800 to 1200 cpm. Upgraded with full automatic lubrication and C.I.P. skid for dairy applications.
