Bottle mapping

Fitting a new bottle into your filler

JBT Food & Dairy Systems has been producing fillers for many decades; therefore, we are highly experienced in running all types of sizes and shapes in our machines. Screw top or seal, HDPE or PET, pouch or bottle, when needed, JBT delivers quality at the highest standards.

Fit your customer needs

Changing markets influence the needs for different bottle shapes and types for consumers and differentiating from competitors is key for any business. The JBT filler is especially designed to fit a wide variety of bottles and pouches. The neck handling of the machine minimizes the impact of a modification in the design of a bottle.

Get with the program

To accommodate new bottles going into the filler, JBT has developed a program to run new bottle shapes and sizes without compromising the quality and minimizing the impact on production. This program is split into three phases.

1. Evaluation
2. Modification
3. Installation

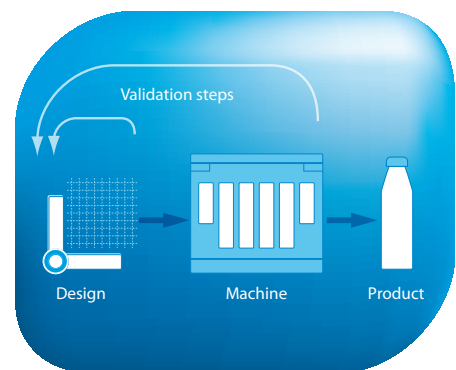

When the evaluation shows that a bottle design is difficult to sterilize, fill or handle, feedback on what needs to be improved to produce the bottle will be specified in a report. When the evaluation shows if and how the change can be accomplished, a quote will be provided for the modification in the 2nd phase.

The new bottles are evaluated based on the new drawing and tested in our Amsterdam testing facility. The result of the analysis will be a kit for that replaces the original bottle handling parts, if needed. A new software configuration is updated before the new bottle goes into production, thereby minimizing the start-up disruption with the new bottle design.

FDA

The change methodology is fully aligned to fit FDA requirements. CCP lists, validation test runs, evaluation of the microbiological results are all part of the scope for FDA machines. These will all be aligned with your process authority.

Please contact your JBT Customer Care manager for more information.
