

Upgrade Kits

Quality for more than one lifetime

JBT is producing high quality machines for more than 100 years. The robust and proven technology results in equipment running production for 20+ years. Once the equipment has reached its production lifespan, the application has changed, or the equipment even outlive their owner it can still be reconditioned. As OEM supplier JBT offers a solution to completely rebuild the old equipment to the new industry standards and changed requirements offering high quality with a guaranteed performance. A JBT equipment is built to last for more than one lifetime.

Bring in the R

Machines that reached their end of lifecycle will be inspected and validated if they are still qualifying for a rebuild. After inspection the machines are shipped back to the JBT manufacturing unit to start the reconditioning. To which extend the equipment rebuild will be done defines the difference between a model R and a model R+. No matter which grade of reconditioning, all machines will be in accordance with new safety regulations, and risk assessment on all recycled parts will be done in same manner as parts used to build the new equipment. For both grades of rebuild the machine will be fully tested at operational speed (conditions) before it leaves the JBT factory. With this concept JBT offers their customers a reliable solution for another 20+ years and differentiates itself from a machine trader or local service provider.

Model R

The model R solution is designed for introduction to new customers. After the machine has been completely dismantled the re-assembly is done with thoroughly checked parts and where needed the parts are renewed resulting in a trouble free production machine. These machines will be significantly lower in price than a new machine. Buying a Model R will allow a customer to use a strong performance machine for a price that is less than the competitors.

Model R+

The model R+ solution follows the same philosophy as the model R however it is more engineered to suit the needs of the new application for which it is destined to be used. Therefore same quality and features as on a new machine can be found on a model R+ but for a lower price! The machine will be fully upgraded for all recent technologies and will be customized to fit the product needs of our customers.

If you are interested in a Model R or model R+ machine, please contact your Area Customer Care Manager for more information.
