

Upgrade Kits

Add UPS to sterile tank

General information

JBT Food & Dairy Systems has been producing machines for more than 100 years. The sterile tanks are one of the most reliable products you can find on the market today.

What's the problem?

These sterile tanks can contain a high capacity of sterile product that is very valuable. If, for some reason, the plant has loss of power, the product in the tank will become unsterile and all product needs to be disposed. This is a very valuable loss.

What is the new functionality?

By adding a UPS (backup battery) to the control system, the tank can still respond after a power loss. As long as the steam and control air is still available, the software is configured correctly, the tank can go into a safe position and the steam locks can prevent the product from being wasted.

Electrical installation takes approximately 8 hours. The software can be created and tested remotely. Therefore software implementation only takes two hours.

Please contact your JBT Customer Care manager for more information.
