

DSI™ J-Scan™ Inspection System

Automate your quality assurance process and decrease production costs with the new and easy-to-use DSI J-Scan Inspection System from JBT FoodTech

This new system enables you to:

- Report process yield or mass flow rate in real time
- Validate the quality of incoming product
- Replace QA sampling with in-line 100% inspection
- Scan and sort product
- Display and store real time product and process data
- Access your data from multiple platforms
- Implement feedback and feed forward control systems

Measure up

Now you can directly and consistently measure what matters most on your processing line. The DSI J-Scan Inspection System is an in-line product scanning system for 100% inspection applications. The system delivers value by providing corrective feedback to operators using upstream processing equipment or high-speed precision sorting, of naturally occurring items ranging in size from small portions to pork bellies.

New technology eliminates the need for routine camera calibration and maintenance. Now your QA team can advance from manual or semi-automated quality-assurance sampling to a full, in-line automated inspection and reporting system. Our standard DSI Q-LINK™ Software platform offers an easy-to-use, touch screen interface to make product SKU changeovers quick and effortless. The system's modular and expandable design provides the ability to control an integrated sort system or provide control signals to existing sorters. You can measure the following:

- **Length and Width:** options include minimum width rectangle, down belt, primary-axis, long-point and more
- **Height:** average, filtered average, smart peak, focus point and more
- **Basic:** area, volume, aspect ratio, slope and more
- **Advanced:** mass flow and yield
- **Defects** such as misformed pieces, holes and tears
- **Greyscale** lean/fat differences
- **Fit Checks:** container and shape
- **Flatness:** caliper and standard deviation
- **Shape Conformance**
- **Concavity Total**
- **Custom**

Access with ease

The new DSI Q-LINK Data Center puts your input product data and your process data into a new secure and password protected database for convenient use.

- Collects and stores DSI production data real-time
- Uses SQL Azure service to safely and robustly store all data
- Comes standard with online, easy-to-use data reports
- Allows access data and reports from most any web enabled device
- Provides password protection so only those with proper credentials can access
- Allows you to download your data at any time for additional backup protection

We are your single source for profitable processing solutions

JBT FoodTech can provide you with portioners, freezers and everything in between – including process control, food product development assistance, operator training and a full range of customer support alternatives.

Our Food Technology Centers have served leading processors in the development of many of the world's most popular food brands. Learn how to increase your processing potential by contacting your JBT FoodTech Account Manager or by visiting our website.

We're with you right down the line.™
