# JBT AVURE® HPP

iOPS®

Maximize uptime, productivity and profit.

JBT-Avure iOPS®

Maximize your return on investment.

JBT-Avure iOPS® is Overall Equipment Effectiveness (OEE) software for improved HPP factory utilization, visibility and control. With iOPS® manufacturers can capture more data, analyze it faster, and act on it immediately. Get access to important production effectiveness data in real time to locate bottlenecks and root causes through production and machine utilization reports.

Smarter.
Made Simpler.

iOPS® is cloud based with military grade security. By monitoring OEE & downtime, manufacturers can pinpoint failures within the HPP production environment. The data can then be analyzed and viewed from different angles with user friendly dashboards. The insights gained help to formulate improvement measures in your production line.

Data generated through iOPS® includes productivity, availability, quality & failure rates, cycle overviews, machine alarms, wait time analysis and batch synopsis. The dashboards can generate reports and filter by date ranges. Optimize HPP production for better equipment control and operation with JBT-Avure's iOPS®.
