Mechanical Advances that Reduce Maintenance while Improving Uptime

Safely and easily maintain the outfeed kicker bar

A re-designed Kicker Bar with Magnetic Clutch makes it easier to maintain and upgrades the safety

The new Kicker Bar is driven off a secondary idler sprocket moving the system away from the main drive roll making it easier for maintenance crews to access wear components.

The Magnetic Clutch consistently releases when over pressure. This is a significant safety upgrade over the standard direct-drive kicker bars without the clutch.

The Kicker Bar Upgrade Kit can be installed in the same time it takes to replace a worn kicker drive belt, thus uptime is maintained.

The Kicker Bar Upgrade Kit

- Is driven off an idler sprocket remotely from the belt motor roll
- DOES NOT require removing the main drive motor to service
- DOES NOT require breaking the main outfeed belt for service
- Boasts more consistent release
