

Upgrade Kits

Customer Care Program

Upgrading your lubrication system by increasing precision

JBT SF&DS Amsterdam is globally providing high quality filling systems. These systems are known for their reliability and durability. The uptime of JBT SF&DS systems will provide our customers the competitive advantage over their competitors. It is our goal to improve this advantage in any way we can. Therefore we are always solving issues that result in loss of product, or loss of productivity.

The original lubrication system uses a significant amount of grease to lubricate the system. Sometimes this results in accumulated residue on the chain.

Therefore regular maintenance cycles include intensive cleaning of the chain and the surrounding to ensure a clean production site.

The new lubrication system has the following advantages:

- Precise and controlled lubrication on the chain links.
- Adjustable nozzles to maintain the correct lubrication.
- Reduced consumption of lubricate.
- Cleaner surrounding of the chain section.

The new lubrication system can be installed in the old location by a 1 to 1 replacement. Therefore installation only will take 2 days. Contact your Area Customer Care Manager to make a project price for your machine.
