

Upgrade Kits

Add reason to stop

General information

JBT Food & Dairy Systems has been producing high quality machines for over 100 years. Blow molding machines produced in 1971 are still producing today! Machines that have been installed almost 50 years ago, clearly missed out on some of the developments that have taken place. By implementing upgrades that are available, your old machine can be fitted with current technologies.

What's happening?

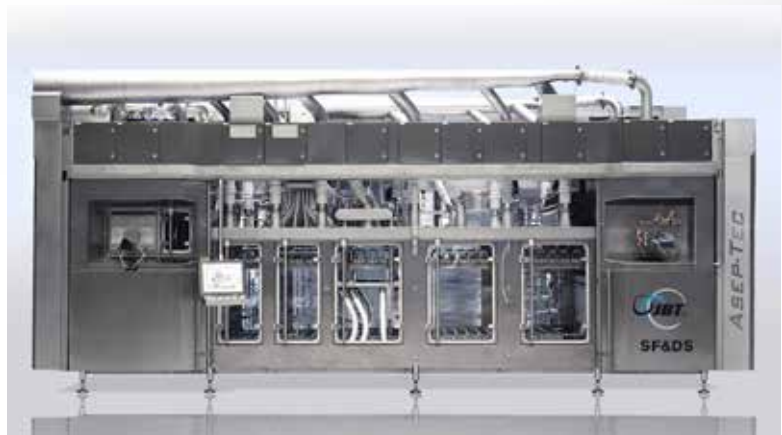

The operators can stop the machine using the HMI interface. When we analyze data this stop action is not related to an activity. Therefore statistics show "operator stopped machine" as a reason

If you want an automatically registered reason for stop, this can be implemented in the interface.

After this change, when the operator stops the machine a pop-up will show a pre-defined list of options. The operator can select his reason for stopping and continue.

The change can be prepared and tested in a virtual machine. Therefore a limited downtime, of maximum 4 hours is needed for implementation

By adding these options the reporting for your machine can identify what activities take the most time. This will result in a better improvement structure.

Please contact your JBT Customer Care manager for more information.
