PRoCARE®

The smart way to produce
more tonnage per day

jbt.com

JBT builds weight fillers for the Dairy industry. To keep the machines up to date we introduce a continuous improvement plan. This can involve:

- ✓ Maintenance improvements
- ✓ Accuracy improvement

This leaflet describes the replacement of standard capping heads with a watertight execution.

History

Zalkin screw cappers with hysteresis magnetic heads, whether it be standalone or on JBT Monobloc, are fitted with BH 5 hysteresis screw capping heads.

What does it resolve?

The design of the old screw capping head was from a hygienic point of view sub-optimal as it had product retention areas.

What is the new functionality?

The newly developed watertight screw capping head (BH 5) has been developed to meet the stringent requirements of the beverage industry by:

- ✓ Designing a fully watertight head to limit bacteriological contamination risks, without retention areas.
- ✓ Improving the removal torque performances
- ✓ Chuck quick release available

*BH5 head
with jaws*

What will be modified?

The capping heads fit in the existing turret. Both the upper as well as the lower part need to be changed for the new design. After placement, applied torque has to be set which can be done without tools.

What's the impact?

Removal of the existing screw capping head and placement of the new H5 type can be done in 1 hr per capping head, including torque adjustment.

What are the benefits?

- ✓ Better product safety
- ✓ Better removal torque consistency
- ✓ Easy maintenance
- ✓ Suitable for external cleaning with chemicals

Please contact your JBT customer care manager for more information or a quote.
